

Sebastian Nagel

Senior Software Engineer

I am a software engineer / roboticist getting excited about functional programming languages, compilers/interpreters, distributed systems, micro-service architectures and web technologies.

Experience

since 2016 **Franka Emika GmbH**, Munich - www.franka.de.

2014 – 2016 **KBee AG**, Munich.

2013 – 2014 **Kastanienbaum**, Munich.

Being involved from the beginning in creating the robot programming environment at Franka Emika, KBee and Kastanienbaum, I covered topics like

- **Robot programming language design** created formal syntax and semantics, parsers, type checker and interpreter for a robot programming language mostly written in Haskell
- **Service oriented architectures** design and implementation of a ZeroMQ based Middleware layer, message description language, message code-generation, Haskell tools and C-library
- **REST API server** Haskell backends using Snap and Servant/WAI
- **Web frontends** design and development of single-page applications in JavaScript ES6 and PureScript using React and Halogen
- **Hardware and systems programming** interface with hardware devices over Serial/UART or CAN using C++ and Haskell
- **Embedded Linux** maintaining the cross-toolchain build environment e2factory, and creating a just-enough-operating system including tasks like configuring bootloaders, hard drive encryption and networking
- **Planning and coordinating** the development of an open-source C++ library for low-level robot control and ROS interfaces, 4-5 people team in agile Scrum processes [frankaemika](https://frankaemika.github.io)
- **Release management and versioning** of the Panda research product, including legal aspects like open-source license compliance
- **Continuous integration and deployment** setting up and maintaining jobs using Jenkins, Docker containers for distribution and orchestration in multiple environments

Munich – Germany

1/2

Education

2011 – 2014 **MSc Robotics, Cognition and Intelligence, TU Munich.**
Interdisciplinary course of computer science, mechanical and electrical engineering covering topics like Robotics, Control, Computer Vision and Machine Learning

2008 – 2011 **BSc Computer Science, FH Dornbirn.**

Academic

Master thesis *A dynamic, distributed and service-oriented robot control architecture (available on request)*

[ML project](#) *Segmenting and classifying GPS traces to identify types of transportation*

Side projects

nginx-jwt nginx C module to issue JSON Web Tokens (JWT) as JSON Web Signature (JWS) payload and verify their presence in headers [ch1bo/nginx-jwt](#)

hdevtools maintaining and patching these Haskell developer tools to new GHC releases [hdevtools/hdevtools](#)

ambicam Python scripts using OpenCV on a RaspberryPi with PiCamera to send illumination data to an “ambilight” setup [ch1bo/ambicam](#)

garmin-otp-authenticator Garmin ConnectIQ Widget to generate HOTP/TOTP one time passwords, basically a SHA1 implementation in the MonkeyC language [ch1bo/garmin-otp-authenticator](#)

sonected.at Occasional technical consultant work for this personal management platform [sonected.at](#)

Interests

Mountains Cross-country skiing and hiking the Austrian and German alps in winter and summer

Science Fiction Some authors I like are Daniel Suarez, Ernest Cline, Philip K. Dick

Crypto Currencies Have been using and trading Bitcoin in 2014, lost track and only recently came back to it
